Mathematics Nonfiction The purpose of this volume is to review the results in spectral graph theory which have appeared since 1978. The problem of characterizing graphs with least eigenvalue  $-2$  was one of the

original problems of spectral graph theory.

The paper lays the foundations of the theory of discrete event systems with mixed constraints. We introduce min-max functions,  $F: \mathbb{R}^n \rightarrow \mathbb{R}^n$ , which are constructed using finitely many operations of min, max and +, and study them as dynamical systems. Among other results, we give a complete account of the periodic behavior of functions of ...

discrete (or homotopy equivalent to a discrete space), the situation cannot be adequately described in the usual language of set-valued sheaves. However, the classifying space  $BG$  is almost discrete: since the homotopy groups  $\pi_i BG$  vanish for  $i > 1$ , we can recover  $BG$  (up to homotopy equivalence) from its fundamental groupoid.

Rob Kirby, a mathematics professor at Berkeley, recently published an open letter discussing the rising subscription prices of mathematics journals. Although he doesn't include them in his discussion, exactly the

same issues apply to discrete mathematics and computer science journals.
