

### **distributed systems concepts and pdf**

Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which then communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal.

### **Distributed computing - Wikipedia**

In software development, distributed version control (also known as distributed revision control) is a form of version control where the complete codebase - including its full history - is mirrored on every developer's computer. This allows branching and merging to be managed automatically, increases speeds of most operations (except for pushing and pulling), improves the ability to work ...

The Future: During the past 20+ years, the trends indicated by ever faster networks, distributed systems, and multi-processor computer architectures (even at the desktop level) clearly show that parallelism is the future of computing.. In this same time period, there has been a greater than 500,000x increase in supercomputer performance, with no end currently in sight.
