Prevalence and human exposure. Due to the ubiquity of plasticized plastics, the majority of people are exposed to some level of phthalates. For example, most Americans tested by the Centers for Disease Control and Prevention have metabolites of multiple phthalates in their urine. In studies of rodents exposed to certain phthalates, high doses have been shown to change hormone levels and cause ...

Endocrine disruption: The European commission has determined that there is sufficient evidence that DBP and DEHP leads to endocrine disruption in living organism. In addition, the Endocrine Disruption Exchange (TEDX) includes DEP, DEHP, and DBP as endocrine disruptors. Two decades of research suggest that phthalates disrupt hormones, which can lead to harm during critical periods of development.

Polyester is a very popular fabric choice - it is, in fact, the most popular of all the synthetics. Because it can often have a synthetic feel, it is often blended with natural fibers, to get the benefit of natural fibers which breathe and feel good next to the skin, coupled with polyester's durability, water repellence and wrinkle resistance.
