In signal processing, cross-correlation is a measure of similarity of two series as a function of the displacement of one relative to the other. This is also known as a sliding dot product or sliding inner-product. It is commonly used for searching a long signal for a shorter, known feature. It has applications in pattern recognition, single particle analysis, electron tomography, averaging ...

Body image is a person's perception of the aesthetics or sexual attractiveness of their own body. It involves how a person sees themselves according to the standards that have been set by society. The Austrian neurologist and psychoanalyst Paul Schilder coined the phrase body-image in his book *The Image and Appearance of the Human Body* (1935). Human society has at all times placed great value ...

The CAMSIZER uses dynamic image analysis technology to provide a fast and reproducible technique for the particle size analysis of proppants. The results are extremely reproducible, and identical to the sieve data thanks to an intelligent sieve correlation function in the software.

Starch content of the samples ranged between 0.3 and 1.3%: cloudberry cells had the lowest and stoneberry cells the highest starch content (). The total free sugar content varied between 17.6 and 33.6%, stoneberry cell sample accumulated the lowest and cloudberry the highest amount of free sugars.
