In statistics, standardized [regression] coefficients, also called beta coefficients or beta weights, are the estimates resulting from a regression analysis that have been standardized so that the variances of dependent and independent variables are 1. Therefore, standardized coefficients refer to how many standard deviations a dependent variable will change, per standard deviation increase in ...

Logistic regression is a method for fitting a regression curve,  $y = f(x)$ , when  $y$  is a categorical variable. The typical use of this model is predicting  $y$  given a set of predictors  $x$ . The predictors can be continuous, categorical or a mix of both. The categorical variable  $y$ , in general, can assume different values.
