The dinoflagellates (Greek $\delta\iota\sigma\kappa\alpha\lambda\epsilon\iota\sigma$, dinos "whirling" and Latin flagellum "whip, scourge") are a classification subgroup of algae. They are a large group of flagellate eukaryotes that constitute the phylum Dinoflagellata. Most are marine plankton, but they also are common in freshwater habitats. Their populations are distributed depending on sea surface temperature, salinity, or depth.

The word bacteria is the plural of the New Latin bacterium, which is the latinisation of the Greek $\beta\alpha\kappa\tau\epsilon\rho\iota\alpha$ (*bakterion*), the diminutive of $\beta\alpha\kappa\tau\epsilon\rho\iota\sigma$ (*bakteria*), meaning "staff, cane", because the first ones to be discovered were rod-shaped.. Origin and early evolution

Histoire. Les composés du bore (arabe Ø"Ù±Ù, - buraq, persan burah « brillant »), sont connus depuis des milliers d'années. Dans l'Égypte antique, le procédé de momification dépendait du natron, un minerai contenant en impuretés des borates ainsi que d'autres sels plus communs. Il est connu par les métallurgistes et céramistes depuis la plus haute Antiquité.

Anyone who starts looking into the Protocols of the Meetings of the Learned Elders of Zion will frequently encounter the old chestnut about a "hoax" or a "forgery". When Philip Graves made the allegation in 1921, long before the days of the internet and all the pages detailing the various logical fallacies, his target audience had never heard of a circular argument or a non sequitur.
