Bicycle and motorcycle dynamics is the science of the motion of bicycles and motorcycles and their components, due to the forces acting on them. Dynamics falls under a branch of physics known as classical mechanics. Bike motions of interest include balancing, steering, braking, accelerating, suspension activation, and vibration. The study of these motions began in the late 19th century and ...

Four on-lattice and six off-lattice models for active matter are studied numerically, showing that in contact with a wall, they display universal wetting transitions between three distinctive phases.

External ballistics or exterior ballistics is the part of ballistics that deals with the behavior of a projectile in flight. The projectile may be powered or un-powered, guided or unguided, spin or fin stabilized, flying through an atmosphere or in the vacuum of space, but most certainly flying under the influence of a gravitational field.

I know you're not serious, but! This reminds me of something Kenzi said this weekend in California, which is that her least favorite kind of CFAR applicant is the one who says "I have come up with the optimal plan for how to improve my life and the world, but instead of doing it I just sit around and play video games."

1. Adversity. In 2013, the United States reached an educational milestone. For the first time, a majority of the country's public school students — 51 percent of them, to be precise — fell below the federal government's threshold for being "low income," meaning they were eligible for a free or subsidized school lunch.

'Attitude control' is understood here as the characteristics required to ensure that any 'vehicle' moves in an appropriately coordinated manner -- whatever the degree of subtlety of the space through which that movement takes place.

#GAN\_Paint: Learn to paint with an AI system: “Generating pictures out of neuron activations” a new, AI-infused photoshop filter! MIT researchers have figured out how to extract more information from trained generative adversarial networks, letting them identify specific “neurons”™ in the network that correlate to specific visual concepts.

The strawberry, *Fragaria* *—* *ananassa*, is an allo-octoploid ( $2n = 8x = 56$ ) and outcrossing species. Although it is the most widely consumed berry crop in the world, its complex genome structure has hindered its genetic and genomic analysis, and thus discrimination of subgenome-specific loci among the homoeologous chromosomes is needed.

## **Discrimination of candidate subgenome-specific loci by**

Today's News: The Riley Report JUNE 2017 Tuesday - June 13, 2017 On This Day In History 1777 - The Marquis de Lafayette arrived in the American colonies to help with their rebellion against the British.
