Noncommutative Geometry and Gravity ... sistently deform Riemannian geometry into a noncommutative Riemannian geometry. We address this question by considering deformations of the algebra of functions on a manifold obtained via a quite wide class of  $\hat{\ast}$ -products. In this framework we success-

Noncommutative geometry has as its limiting case the classical geometry, but geometry expressed in algebraic terms. Thus to understand its relation with classical geometry one should first understand one of the most important ideas of mathematics which can be expressed as a duality between commutative algebra and geometry.

are truly noncommutative lattices since their algebras of continuous functions are non-commutative  $C^*$ -algebras of operator valued functions. Techniques from noncommutative geometry have been used to constructs models of gauge theory on these noncommutative lattices [4, 5]. Noncommutative lattices are described at length in Section 3.

noncommutative action and derive the noncommutative Schwarchild like static solutions. In section3, we discuss the modified Newtonian potential and finally in section4, we give some of qualitative results and draw our conclusions.

Weeks one and two will focus on seminars and collaborative research amongst the participants.; Week three will take the form of a masterclass at the postdoctoral level on Kasparov theory and its applications. There will be a particular focus on the unbounded Kasparov product and on open problems in the theory and the techniques required in the applications.

### **Program - Noncommutative Geometry**

Noncommutative geometry (NCG) is a branch of mathematics concerned with a geometric approach to noncommutative algebras, and with the construction of spaces that are locally presented by noncommutative algebras of functions (possibly in some generalized sense).
