In electrical engineering and mechanical engineering, a transient response is the response of a system to a change from an equilibrium or a steady state. The transient response is not necessarily tied to abrupt events but to any event that affects the equilibrium of the system. The impulse response and step response are transient responses to a specific input (an impulse and a step, respectively).

Definition. Tay, Mareels and Moore (1997) defined settling time as "the time required for the response curve to reach and stay within a range of certain percentage (usually 5% or 2%) of the final value."

Un sistema automatico di controllo pu<sup>2</sup> funzionare essenzialmente in due modi: come controllo ad anello aperto o come controllo in retroazione.. Il controllo ad anello aperto (o in avanti o predittivo o feedforward) si basa su una elaborazione degli ingressi eseguita senza conoscere il valore dell'uscita del sistema controllato, essendo note alcune propriet<sup>2</sup> del sistema da controllare.
