The details about these tools will be brief as books are written about each item. Think of the presentations below as hors d'oeuvres (a little snack food or starters) not the main course. The most important reliability tool is a Pareto distribution based on money specifically based on the cost of unreliability which directs attention to work on the most important money problem first.

Software maintenance in software engineering is the modification of a software product after delivery to correct faults, to improve performance or other attributes.. A common perception of maintenance is that it merely involves fixing defects. However, one study indicated that over 80% of maintenance effort is used for non-corrective actions. This perception is perpetuated by users submitting ...
