Robotics is the scientific and engineering discipline concerned with the creation, composition, structure, evaluation, and properties of embodied artificial capabilities.. It does not include naturally occurring capabilities (which would be part of biology) or artificial intelligence without a physical presence (which would be part of computer science).. It includes facets of mechanical ...

Probabilistic planning can be solved with iterative methods such as value iteration and policy iteration, when the state space is sufficiently small. With partial observability, probabilistic planning is similarly solved with iterative methods, but using a representation of the value functions defined for the space of beliefs instead of states.
