### **The Confusion Assessment Method (CAM) diagnostic algorithm**

The Confusion Assessment Method (CAM) was originally developed in 1988-1990, to improve the identification and recognition of delirium. CAM was intended to provide a new standardized method to enable non-psychiatrically trained clinicians to identify delirium quickly and accurately in both clinical and research settings.

The Confusion Assessment Method Instrument: 1. [Acute Onset] Is there evidence of an acute change in mental status from the patient's baseline? 2A. [Inattention] Did the patient have difficulty focusing attention, for example, being easily distractible, or having difficulty keeping track of what was being said? 2B.

### **The Confusion Assessment Method (CAM)**

The Confusion Assessment Protocol (CAP) is a combination of objective measures of orientation and cognition and clinician ratings of other symptoms of early confusion after traumatic brain injury (TBI).

### **This is a Sample version of the The Confusion Assessment**

Despite its adverse impact, delirium remains poorly recognized in clinical practice. The Confusion Assessment Method is a delirium instrument published in 1990, which was created to improve the identification of delirium. The Confusion Assessment Method (CAM) includes an instrument and diagnostic algorithm for identification of delirium.
