The gravitational constant (also known as the "universal gravitational constant", the "Newtonian constant of gravitation", or the "Cavendish gravitational constant"), denoted by the letter  $G$ , is an empirical physical constant involved in the calculation of gravitational effects in Sir Isaac Newton's law of universal gravitation and in Albert Einstein's general theory of relativity.

In celestial mechanics, the standard gravitational parameter  $\mu$  of a celestial body is the product of the gravitational constant  $G$  and the mass  $M$  of the body. = For several objects in the Solar System, the value of  $\mu$  is known to greater accuracy than either  $G$  or  $M$ . The SI units of the standard gravitational parameter are  $\text{m}^3 \text{s}^{-2}$ . However, units of  $\text{km}^3 \text{s}^{-2}$  are frequently used in the ...

Religious believers often claim that the universe is fine-tuned for life, and that this is evidence of God. In fact, this might be the modern believer's favorite argument for God, and the one considered to be the strongest by atheists, including Richard Dawkins.. As such, it invites a careful examination.

Example 5 (Henon-Heiles problem) The polynomial Hamiltonian in two degrees of freedom  $H(p,q) = \frac{1}{2}(p_1^2 + p_2^2) + \frac{1}{2}(q_1^2 + q_2^2) + q_1^2 q_2 - \frac{1}{3} q_3^2$  (12) is a Hamiltonian differential equation that can have chaotic solutions.

Stream power is the rate the energy of flowing water is expended on the bed and banks of a channel. Said another way, it is the potential for flowing water to perform geomorphic work.

Of the various modes of oscillation, our main interest is the first antisymmetric mode. This is because of two

reasons: the first antisymmetric mode involves the largest amount of liquid mass movement, and as we will see in the following section, its frequency corresponds to the driving frequency (at least approximately).
