Turnkey solutions in steam generation nNatural circulation nTower-type design and long residence time of fuel particles and flue gases. nLow fluidising velocities of 4 to 5 Meters/Sec. nHigh carbon combustion efficiency of around 99% due to ash recirculation.

### **Circulating Fluidised Bed Combustion (CFBC) Boilers**

Water heating is a heat transfer process that uses an energy source to heat water above its initial temperature. Typical domestic uses of hot water include cooking, cleaning, bathing, and space heating. In industry, hot water and water heated to steam have many uses.. Domestically, water is traditionally heated in vessels known as water heaters, kettles, cauldrons, pots, or coppers.

### **Water heating - Wikipedia**

Three-drum boilers are a class of water-tube boiler used to generate steam, typically to power ships.They are compact and of high evaporative power, factors that encourage this use. Other boiler designs may be more efficient, although bulkier, and so the three-drum pattern was rare as a land-based stationary boiler.

Excellent write up. Sound like a very similar system to mine, except I have manual valves instead of the 2 port automatic valves. Mine doesn't lock itself out even though the pump stops working at the same time

but the pump has suffered degradation and makes an awful racket when the heating is on.

"Thermal comfort mediates behavioral modification of heat loss, the most important thermoregulatory response in humans. Thermal comfort is determined by skin-surface temperature, not by tissue heat content, cutaneous heat flux, or central temperature.However, comfort produced by a local thermal stimulus depends both on the location of the stimulated skin and the rate of temperature change.
