Treewidth Computations and Approximations treewidth algorithmic techniques and results and treewidth characterizations applications and computations and treewidth and pathwidth of permutation graphs Dr. Alan Cena, United States, Researcher

Treewidth Computations and Approximations - Thesis Scientist

approximation algorithm for treewidth with a constant performance ratio. An important element in our algorithms is the use of a data structure that allows to perform various queries in time $O(c k \log n)$ each, for some constant c .

A c^{kn} 5-Approximation Algorithm for Treewidth

This is the first algorithm providing a constant factor approximation for treewidth which runs in time single-exponential in k and linear in n . Treewidth based computations are subroutines of numerous algorithms.

[1304.6321] A $O(c^k n)$ 5-Approximation Algorithm for Treewidth

This treatise investigates a number of problems related to treewidth and pathwidth of graphs. In total, the book is a smooth introduction to the topic of graphs of bounded treewidth.

Treewidth : Computations and Approximations (eBook, 1994)

Treewidth. Functions for computing treewidth decomposition. Treewidth of an undirected graph is a number associated with the graph. It can be defined as the size of the largest vertex set (bag) in a tree decomposition of the graph minus one.

Approximations and Heuristics – NetworkX 2.2 documentation

This treatise investigates a number of problems related to treewidth and pathwidth of graphs. The main objective is to obtain good bounds on the complexity of determining the treewidth and pathwidth for various classes of graphs.

Treewidth | SpringerLink

Abstract. This paper presents algorithms whose input is an undirected graph, and whose output is a tree decomposition of width that approximates the optimal, the treewidth of that graph. The algorithms differ in their computation time and their approximation guarantees.
