Vertical down is recommended for fastest welding of 18 gauge to 3/16" thick steel. A description of the recommended drag technique along with sheet metal procedures are given in the section High-Speed Welding on pages 18-23. Vertical up techniques provide deeper penetration and lower overall welding costs on plate over 3/16" thick.

SMAW or stick electrodes are consumable, meaning they become part of the weld, while TIG electrodes are

non-consumable as they do not melt and become part of the weld, requiring the use of a welding rod. The MIG welding electrode is a continuously fed wire referred to as wire.

Feed the welding rod through the nozzle and into contact with the surface of the component. 5. Following the technique described in Main Welding operations, weld 2cm of the test rod to the surface of the component. 6. Remove the welding tool from the rod and then cut the rod approximately 2cm from the component surface. 7.
